DEVELOPING GREEN PRODUCTS

At Indestructible Paint, we forge many partnerships with our customers. Pratt & Whitney Canada (P&WC) is a world-class manufacturer of aircraft engines. In partnering with P&WC, we have taken the lead in developing environmentally compliant products. For example, we received recent material approvals from P&WC under the specifications CPW714 and CPW715. These products are low VOC (volatile organic compounds), and do not contain any restricted constituents as defined by P&WC.

We also initiated a major effort to convert other product lines to be more environmentally compliant by developing new formulations to remove all restricted materials. This product development philosophy is in line with P&WC 'Green Engine' and 'Green Factory' programs, designed to develop practices and products that have minimal impact on the environment (http://www.pwc.ca/en/0_0/0_1/environment.asp).

In addition, our manufacturing facility located in the United Kingdom is ISO 14001 registered. ISO 14001 is an internationally accepted specification for an environmental management system that ensures products are manufactured in a manner that limits any impact on the environment. Indestructible Paint will continue this trend of developing environmentally compliant products with customers.
